Earnings calls summary: Management’s next moves

Future-facing commitments and development choices | evidence reviewed: FY2025 and H1 2026 official disclosures

WORKING DRAFT | Latest earnings-call transcripts / Q&A not reviewed; evidence below is dated 27 Jul 2026 or earlier.

Strategic direction	Company-disclosed next steps (paraphrased)	What to track next | analyst watchpoints
ADC–IO combinations & delivery format	Rilvegostomig: subcutaneous formulation development is ongoing. AZ disclosed 5 Phase III IO–ADC combination trials in its July strategic framework. [1] pp.24–25 | Evidence E01, E02	Which ADC / indication combinations progress next; SC trial design and dose selection.
Next wave of owned ADCs	Puxi-sam: first Phase III data expected H2 2027. Puxi-sam and torvu-sam were included among owned ADCs planned to launch by 2030. Sone-ve was separately framed as a $3–5bn NRA peak-year opportunity. [1] pp.24–25 | Evidence E03–05	Puxi-sam pivotal readout; launch-enabling evidence for torvu-sam. Opportunity estimates remain non-risk-adjusted.
Weight-loss combinations & oral PCSK9	AZD6234 / AZD9550: Phase IIb was expected in H2 2026. Laroprovstat: first Phase III data expected H1 2027. [1] pp.24–25 | Evidence E06–07	Combination start / design; weight-loss and tolerability data; oral PCSK9 efficacy and longer-term outcomes.
Cell therapy / TCEs: earlier-line & autoimmune	AZD0120: additional Phase III development initiating in newly diagnosed myeloma. AZD0120 and surovatamig also have early trials in autoimmune disease. [1] pp.24–25 | Evidence E08–09	Confirm newly diagnosed MM trial start / design; autoimmune safety, durability and evidence for later-stage investment.
Across-event context	FY2025 CEO: transformative technologies support growth beyond 2030. H1 2026 CEO: >20 high-value readouts over the next 18 months. [2–3, p.1]	

Source types: official call presentation and written results releases. No transcript quotations, Q&A takeaways or latest-call changes are asserted.
