1 - Executive Summary

Revenue growth, US patent expiry profile, late-stage assets and disclosed R&D priorities

FY2025 TOTAL REVENUE	2021–2025 REVENUE CAGR	LATE-STAGE NMEs	NMEs UNDER REVIEW
$58.7bn	**11.9%**	**21**	**4**
2021: $37.4bn	Reported USD; four growth intervals	Company-reported, Jul 2026	One or more major markets, Jul 2026

Revenue mix	Oncology was the largest TA in 2025: $25.6bn, or 43.6% of total revenue. CVRM contributed $12.9bn; R&I $8.9bn; Rare Disease $9.1bn.	p.2
US patent profile	Farxiga's US NME patent expires in 2026; Lynparza's in 2027. Calquence has US NME patents spanning 2026–2032. Their 2025 global Product Revenues were $8.4bn, $3.3bn and $3.5bn.	p.2
Late-stage portfolio	The website lists 45 Phase III program entries across Oncology (28), CVRM (8), R&I (4) and Rare Disease (5). The asset–target map and registration-stage list are shown separately.	p.3
R&D investment areas	AZ highlights four areas: weight management / CV risk factors; ADCs / radioconjugates; next-generation IO bispecifics; cell therapy / T-cell engagers.	p.4
BD record	The coded 2022–2026 YTD cohort contains 30 transactions: 11 acquisitions, 8 asset-rights licenses, 8 research / option agreements, and 3 equity / JV / clinical collaborations.	p.5

H1 2026 update: Total Revenue $30.7bn (+6% CER); CVRM –12% CER. AZ attributes headwinds to Farxiga US LOE and China volume-based procurement.

[1–5,15–23] AZ financial / pipeline disclosures; BD counts refer to the 30-record source-linked cohort, 2022–2026 YTD. CAGR: reported USD, 2021–2025.

Source URLs, definitions and detailed data are included in the slide notes and the companion Excel workbook.

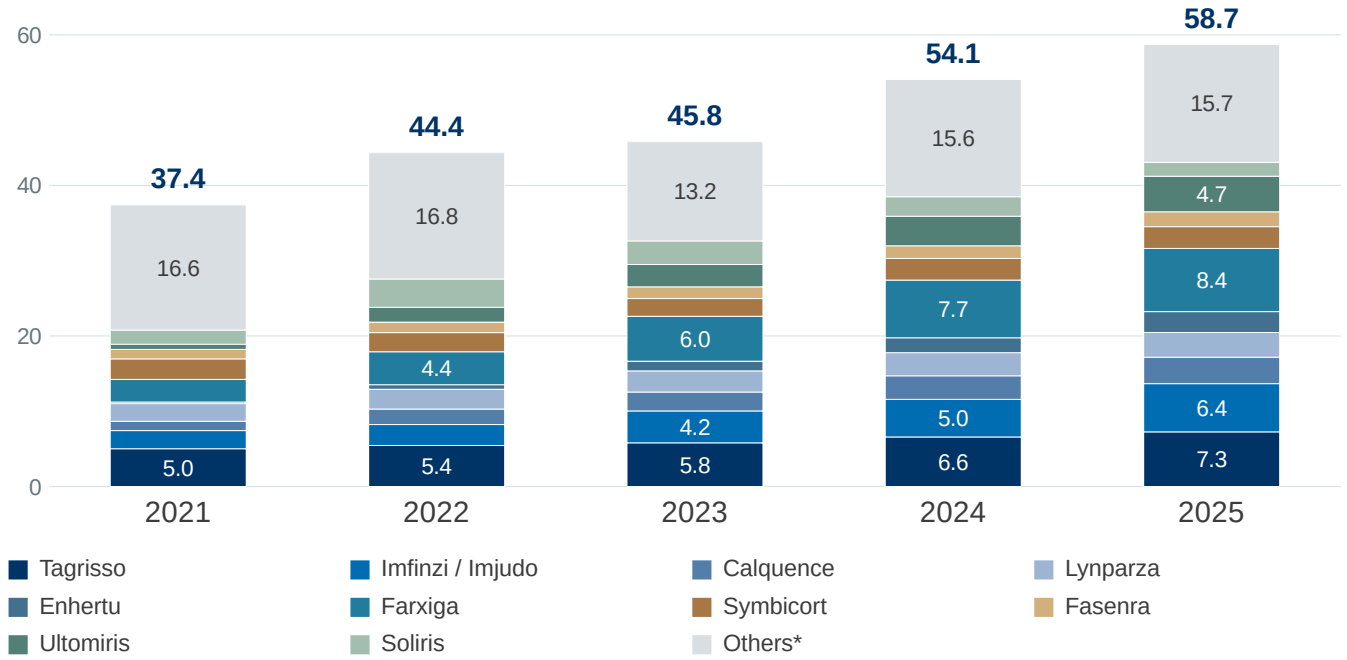

2 - Revenue Growth, US LOE & Portfolio Renewal

Core-product revenue over five years, alongside US expiry dates and the next wave of assets by TA

2021–2025 revenue by core product | US$bn

$37.4bn → $58.7bn | CAGR 11.9%

Core products: 73% of FY2025

US expiry calendar | FY2025 products ≥$1bn

Product	TA	PR $bn	US expiry
Zoladex	Onc	1.15	Expired
Crestor	CVRM	1.22	Expired
Symbicort	R&I	2.89	2025–29†
Strensiq	RD	1.68	2025–29
Farxiga	CVRM	8.41	2026
Calquence	Onc	3.52	2026–32
Lynparza	Onc	3.28	2027
Soliris	RD	1.84	2027; entry 2025‡
Fasenra	R&I	1.98	2028–34†
Breztri	R&I	1.20	2030–38†
Imfinzi	Onc	6.06	2031
Tagrisso	Onc	7.25	2032
Enhertu	Onc	2.78	2033
Tezspire	R&I	1.13	2033
Ultomiris	RD	4.72	2035

† Other patents. ‡ Licensed US biosimilar entry: Mar 2025.

PORTFOLIO RENEWAL | selected same-TA assets and current stages

CVRM | Farxiga 2026
Baxdrostat; balcinrenone/dapa — Phase III

Oncology | Lynparza 2027; Calquence 2026–32
Camizestrant; rilvegostomig — Phase III

Rare Disease | Soliris entry 2025
Ultomiris — marketed; gefurulimab — under review

[2–4,15–19] US dates are the representative LOE benchmark for this analysis. NME patents unless †; further patents may apply. Assets shown are not revenue-offset estimates.

* Others = remaining products + collaboration revenue. Product segments = sales + alliance; Imfinzi includes Imjudo throughout. 2021: Alexion consolidated from 21 Jul.

3 - Phase III & Registration-stage Pipeline

TA and target map of the official July 2026 pipeline; full indication-level records in Excel

45 Listed Phase III program entries[1]

21 Late-stage NMEs | company-reported

4 NMEs under review | major markets

Phase III asset / target map | grouped by TA

TA / entries	Assets and mechanisms represented in the Phase III bucket
Oncology | 28	ADCs: Sone-Ve (CLDN18.2); puxi-sam (B7-H4); torvu-sam (FRα) RC: zadavotide guraxetan (PSMA) IO: rilvegostomig (PD-1/TIGIT); volrustomig (PD-1/CTLA-4); oleclumab (CD73); monalizumab (NKG2A); Imfinzi/Imjudo (PD-L1/CTLA-4) Other: saruparib (PARP1); camizestrant (ER); surovatamig (CD19/CD3); AZD0120 (CD19/BCMA)
CVRM | 8	Balcinrenone/dapa (MR/SGLT2); zibotentan/dapa (ETA/SGLT2) Elecoglipron (GLP-1R); elecoglipron/dapa (GLP-1R/SGLT2) Laroprovstat (PCSK9); baxdrostat (aldosterone synthase); Wainua (TTR ASO)
R&I | 4	Tozorakimab (IL-33); Saphnelo (IFNAR1); Tezspire (TSLP)
Rare Disease | 5	Cliramitug (TTR); eneboparatide (PTH1R); anselamimab (amyloid fibrils); efzimfotase alfa (TNSALP enzyme replacement); gefurulimab (C5)

Registration-stage NMEs

Tozorakimab
IL-33 | COPD

Anselamimab
Amyloid fibrils | AL amyloidosis

Efzimfotase alfa
TNSALP ERT | HPP

Gefurulimab
C5 | gMG

“Under review” is the company’s major-market classification; it does not imply a US filing for every asset.

[1] Program entries ≠ independent assets. Dapa = dapagliflozin; abbreviated asset names and indication-level stages are expanded in Excel.

[4,19] Official pipeline / H1 2026 clinical appendix, 27 Jul 2026. Website Phase III entries include some approved or regional programs. LCM bucket excluded from the 45.

Source URLs, definitions and detailed data are included in the slide notes and the companion Excel workbook.

4 - Company-disclosed R&D Investment Priorities

The four investment areas presented by AZ at H1 2026, with the supporting programs and milestones

AZ investment area	Programs / technologies	Milestones and scale disclosed at H1 2026
Weight management & CV risk factors	Elecoglipron; laroprovstat AZD6234; AZD6234 / AZD9550	6 Phase III trials initiated for elecoglipron Laroprovstat: first Phase III data expected H1 2027 AZD6234 Phase II readout; combination Phase IIb expected H2 2026
ADCs & radioconjugates	Sone-Ve; puxi-sam Torvu-sam; zadavotide guraxetan	Sone-Ve: first positive Phase III data (CLARITY-Gastric01) Puxi-sam: first Phase III data expected H2 2027 Torvu-sam / zada-gu: first patients dosed in Phase III, Q2 2026
Next-generation IO bispecifics	Rilvegostomig Volrustomig and broader IO portfolio	16 Phase III trials across 9 tumor types 5 Phase III trials in combination with ADCs Subcutaneous rilvegostomig development ongoing
Cell therapy & T-cell engagers	AZD0120 | CD19/BCMA CAR-T Surovatamig | CD19/CD3 TCE	AZD0120: Phase III in r/r multiple myeloma; expansion planned Surovatamig: ongoing Phase III in follicular lymphoma / DLBCL Both assets also in early autoimmune-disease studies

Snapshot: 27 July 2026. Expected readout windows reflect the company's outlook at that time; trial counts are not independent-asset counts.

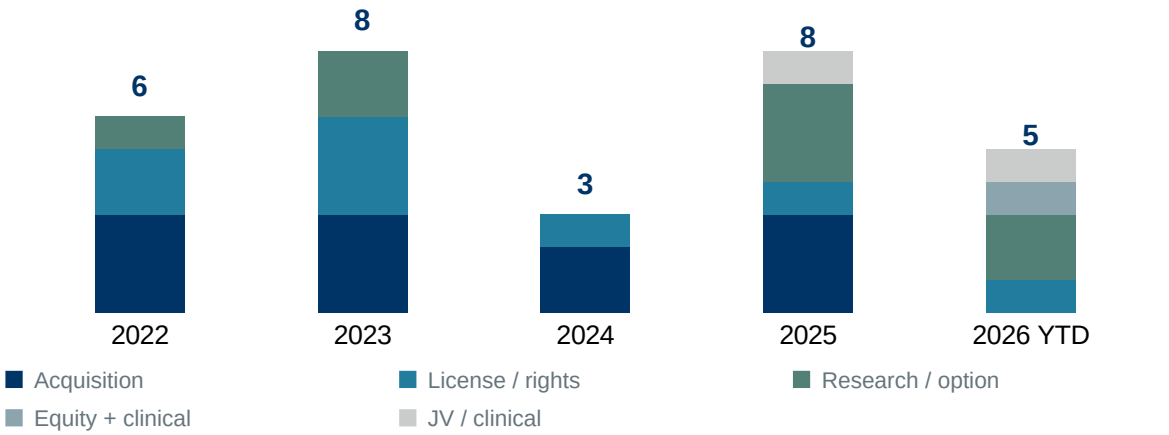

[5] H1 & Q2 2026 results presentation, p.24: "Strategically investing to deliver growth beyond 2030". All four disclosed areas reproduced in this summary.

Source URLs, definitions and detailed data are included in the slide notes and the companion Excel workbook.

5 - BD Transactions | 2022–2026 YTD

Deal type, therapeutic area, modality and target profile of a 30-record public-disclosure register

Deal type | number of register records by year

Therapeutic area | primary TA per transaction

Modality | primary classification

Small molecule	7	Vaccine	2
Antibody	6	Radioconjugate	1
Cell therapy	4	Cell / gene platform	1
Peptide	3	Delivery platform	1
Gene therapy	2	Discovery platform	1
ADC	2		

Target coverage | literal targets in the register

17 records: specified targets | 13: platform / target not singled out

GLP-1R; GLP-1R/GIPR • Aldosterone synthase • Lp(a)
ActRIIA/B • CD19/CD3 • BCMA/CD19 • CLDN18.2
EGFR • PSMA • TROP2 + PD-1/VEGF • PD-1/VEGF
TTR • PTH1R • HIF-PH • RSV/hMPV • SARS-CoV-2

Named targets include multi-target combinations; full partner–asset mapping is in Excel.

Source-linked register: official AZ annual reports / announcements. The cohort is not all company BD activity. 2026 YTD ends 21 Oct; not comparable to a full year.

Source URLs, definitions and detailed data are included in the slide notes and the companion Excel workbook.
