Earnings calls summary: Forward R&D agendas

Selected topics singled out by management or explored in Q&A | assets, combinations, disease settings and technology platforms

H1 2026 earnings call | 27 July 2026

Build EGFR combinations around Tagrisso

Advance Orpathys combinations in MET-driven resistance and Datroway + Tagrisso in first- / second-line disease (TROPION-Lung14 / 15).

Prepared + Q&A | P019, P082 [H1-01]

Move ADCs upstream; use biomarkers in pivotal design

Sone-ve: first-line IO combinations and wider GI exploration. Datroway: AVANZAR tests ITT and biomarker-positive populations within its multiplicity strategy.

Prepared + Q&A | P049, P094 [H1-02]

Extend camizestrant into adjuvant breast cancer

CAMBRIA-1 targets intermediate-/high-risk HR+/HER2− disease after 2–5 years of adjuvant endocrine therapy, with or without prior CDK4/6 inhibition.

Q&A | P127 [H1-03]

Target high-risk cardiorenal disease with combinations

Plan ELEVATE outcomes studies for elecoglipron in HFpEF / CKD on background dapagliflozin; add mechanisms to SGLT2 therapy in high-risk CKD / heart failure.

Prepared + Q&A | P025, P130 [H1-04]

Advance inhaled respiratory approaches

Discuss Phase III plans for inhaled TSLP sunakiment (AZD8630) with Amgen, alongside further development of an inhaled PDE3/4 option for COPD.

Prepared | P025 [H1-05]

Test amyloid depletion on top of ATTR standard of care

Cliramitug: emphasize the depleter mechanism and an add-on trial design; seek mortality / cardiovascular-event benefit rather than assume monotherapy positioning.

Q&A | P106, P115 [H1-06]

Q3 2026 earnings call | 30 October 2026

Broaden ADC–IO partners and combination options

Pair ivonescimab with sone-ve / Datroway in GI trials expected imminently; own IO Phase III readouts expected H2 2027. Plan additional puxi-sam combinations.

Prepared + Q&A | P025, P026, P031, P077, P148 [Q3-01]

Keep Tagrisso as the treatment backbone through progression

Use Orpathys / Datroway combinations to support Tagrisso-based treatment across first line and progression; TROPION-Lung14 / 15 remain key development programmes.

Prepared + Q&A | P185, P186, P069 [Q3-02]

Build oral combinations for overlapping metabolic disease

Laroprovstat / rosuvastatin Phase III data expected in 2027; develop GLP-1 + SGLT2 combinations. GLP-1 + PCSK9 is an opportunity of interest, not a stated trial start.

Prepared + Q&A | P098, P265, P267, P271 [Q3-03]

Plan Imfinzi subcutaneous before LOE

Management expects an Imfinzi SC launch before LOE, with particular value as use moves into earlier settings; no calendar launch date was specified.

Q&A | P171 [Q3-04]

Invest in cell therapy / TCEs beyond current haematology use

Advance AZD0120 / surovatamig and early autoimmune programmes; CEO emphasizes continued investment and rapid progress in in-vivo cell therapy.

Prepared + Q&A | P032, P278, P310 [Q3-05]

Build cancer-vaccine capability internally for now

Asked about personalized cancer vaccines and partnering, CEO points to internal development using infectious-disease capabilities; no modality, stage or firm timeline disclosed.

Q&A | P129, P134 [Q3-06]

Focus: stated next steps and development rationale. Exploration, trial plans and confirmed execution are kept distinct; expectations are dated to each call.
